

DEVICE FOR PRINTING AN IMAGE ON A LARGE SURFACE

Abstract

A device for printing an image on a large surface and that may be held and moved
5 manually and is able to determine position and direction on a surface. The device uses this
knowledge to determine which colors are to be applied on the surface. This determination is
accomplished by matching the determined coordinates and an image stored in a memory of the
device. The stored image may then be superimposed to the surface to be painted.
